“BIG EASY 2” Quick Guide

Switching on:

- Press the * key on the bottom left for approx. 2 seconds until the display lights up and the “Please wait” message appears.
- Wait until the phone is ready and the “Service Provider” appears on the screen. (A green light will flash at the top right.)

Switching off:

- Press the # key on the bottom right for approx. 2 seconds until the light comes on (the display will say “Goodbye”). The phone will then switch off.

Making a call by dialing:

- Dial the number.
- Check that the number in the display is correct.
- Press the large green  key briefly to connect the call and put the phone to your ear.
- At the end of the call, press the red  key briefly to disconnect the call.

Making a call using key I, II or III:

- Press one of the keys I, II, or III briefly to display a previously stored contact.
- Press the large green  key briefly to connect to this number and put the phone to your ear.
- At the end of the call, press the red  key briefly to disconnect the call.

Emergency function: Press key I, II or III for approx. 2 secs. and hold it down until the alarm sounds (N.B. You need to activate the Emergency Function first.)

Tips:

- A flashing green light on the top right means the phone is ready for use.
- A flashing red light on the top left plus an audible signal means the battery needs to be recharged urgently. The battery light stays on while the phone is being charged. (Always keep the phone on charge when you are at home – this will not damage the phone.)

1 Introduction

Thank you very much for choosing the BIG EASY 2[®] Mobile Phone.

This mobile phone was developed with one particular aim in mind: to make the basic function of a phone. i.e. making phone calls, a priority and to design it so it's convenient to use. In addition, we have put particular emphasis on its user-friendly qualities and fully accessible design. This mobile phone can also increase your personal safety and provide more health safeguards.

We would especially like to thank all those who have been unceasing over the years in their demands for a phone like the BIG EASY 2[®]. The mobile phone you see before you is the result of your efforts, suggestions and ideas. The process of development, unit design and production was established and remains in Germany.

If you have any suggestions for improvement, we'd be delighted to hear about them.

Dr. Darius Khoschlessan
CEO
fitage GmbH & Co. KG, Mannheim

3 Safety advice

Please read this safety advice before reading the operating instructions or using the phone

Danger

Medical aids such as hearing aids or heart pacemakers may be affected by electromagnetic waves from the mobile phone and may malfunction as a result. You are therefore advised to keep a minimum distance of 15-20 cm between these devices and the mobile phone and not to hold the phone directly to the ear if you are wearing a hearing aid. Do not carry the mobile phone in your shirt pocket if you are fitted with a pacemaker. Contact your GP for further information.

Warning

Do not hold the mobile phone to your ear while the ringtone is still sounding or when the “hands free” option is activated. If these sounds are delivered close to the ear, they can cause serious long-term hearing damage. Under no circumstances should the mobile phone be held close to the ear when the “hands free” option is activated or while it is ringing.

Warning

Observe the legislation and local regulations when using your mobile phone. These may vary from country to country, for example on board aircraft, at petrol filling stations, in hospitals and while driving.

Warning

There is a risk of explosion if the battery is not replaced correctly or if it is exposed to a naked flame. Do not attempt to open the battery. Only use a charger and battery which is supplied or approved by the manufacturer. When replacing the battery, ensure that it fits properly and is inserted the right way round. It is designed so that it cannot be inserted the wrong way round without using force.

Warning

The SIM card can be removed. It is possible for small children to swallow it, so keep your mobile phone **out of the reach of children at all times**.

Please note:

Your mobile phone should only be used for the purpose for which it is intended and only in places where its use is permitted. Do not expose it to moisture, intense heat or cold and protect it from impact. Unauthorised use of this mobile phone may damage it and invalidate the warranty. Do not attempt to open your phone, except to replace the battery or SIM card. Any other modifications to the phone are not

permitted and will result in the loss of your user authorisation.

Please note:

This mobile phone may interfere with television sets, radios and electronic devices when placed in close proximity.

Advice

Please note that the internal antenna is fitted along the base of the mobile phone housing. This **reduces radiation exposure** to the head compared to phones where the antenna is fitted at the top. In addition, as the antenna is built into the base of the housing, you should - as far as possible - experience less interference when using the phone with most types of **hearing aid**.

Nevertheless, your mobile phone may cause interference with certain hearing aids in spite of these special features. If you experience interference, you are advised to contact the manufacturer of your hearing aid to enquire about alternative solutions.

Make sure you do not cover the lower end of the device with your hand when you are using it. If your hand covers the **antenna reception area**, the phone will have to operate at higher than normal transmission levels, which will reduce the length and quality of its performance. It will also affect the quality of your connection.

However, there is no scientific evidence that covering up the antenna reception area with the hand will result in health problems.

4 Your mobile phone and its parts

Please read these operating instructions carefully and keep them in a safe place. No liability is accepted for losses caused by inadequate attention being paid to these instructions or where the advice contained therein is not followed.

If technical questions or defects arise, please refer at all times to the service advice provided at the end of this booklet.

4.1 Housing

The housing of your mobile phone is manufactured from high-quality ABS plastic with a paint finish.

- To enjoy a long and problem-free service life, please protect your mobile phone **against extreme temperatures** (below -10°C and above $+55^{\circ}\text{C}$). Protect the paint finish by not allowing the phone to come into contact with rough surfaces and strong abrasive or cleaning agents.
- The housing is **not waterproof!** Should the equipment come into contact with water, dry the outside of it at once. Disconnect the phone immediately if it is connected to the power supply. Open the battery compartment and remove the battery fully by removing the connection leads. Stand the mobile

phone upright where there is good ventilation. Do not expose the phone to any kind of heat. Do NOT open the housing! Should the unit still show any traces of moisture after drying, or should there be a malfunction after the battery is re-inserted, please contact your mobile phone dealer.

- Please ensure that **no dirt or sand enters the openings** on the phone (i.e. buzzer signal outlet, sockets for headphones and battery charger, microphone and loudspeaker outlets)
- Please **clean** the outside of your phone with a soft damp cloth.
- Do not drop, knock or shake the phone. **Rough handling** can damage the internal parts. Damage caused in this way is not covered by the warranty.

4.2 Electronic key lock

To prevent the keypad from being accidentally pressed, you can activate the **electronic key lock**, which locks all the keys except for the emergency call function on the I, II and III keys.

You activate or deactivate the electronic key lock by

pressing the key for 3 seconds.

When the key lock is activated, you will see the following message on the top line of the display:

Incoming calls can still be taken using the call acceptance key. The lock is released for the duration of the call and is automatically reinstated again afterwards. The emergency call function is also available at all times.

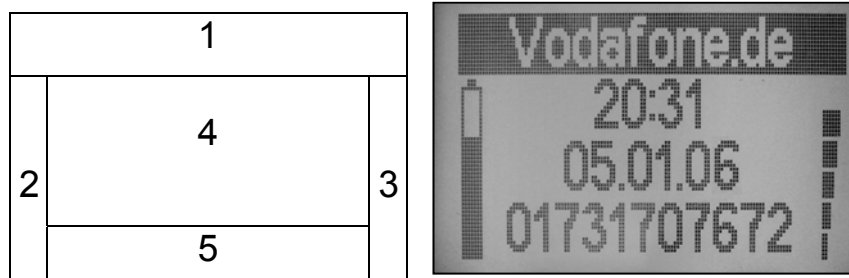

When the key lock is activated, you can use the key to illuminate the display so that you can see the time in the dark.

You also have the option of activating the key lock automatically (when this has been deactivated by a call, for example) after approx. 60 seconds, provided you do not make a call or press any of the keys. The procedure for setting up this function is described in chapter 11.6.9 (page 107).

4.3 Display

When the mobile phone is ready for use, the display is divided into the following areas:

1. **Headline:** The network service provider you are currently using will be displayed here. On activation or if required, the symbols and/or texts (e.g. Connecting) and information on settings (e.g. Alarm on) in the display are reversed (i.e. displayed the other way round).
2. **Battery charge level:** Indicates the level of battery power in the form of a battery symbol which shows the level of charge in six different stages.
3. **GSM mobile phone network signal strength:** The strength of reception is indicated here - from no bar (minimum) to six bars (maximum) - one above the other. Where no signal corresponding to your SIM card is available, no bar will be displayed.
4. **Display:** Shows the time and the call number or the name entered for an incoming call.
5. **Information line:** Shows your own number (if entered) or other information.

When the **selection menu** is on the screen, the **menu options** are displayed in the following areas:

1
2
3
4

Menu	

1	Phone book
2	Settings

1. **Header:** This line mostly contains the name of the area of use (category) which is to be selected or changed.
2. The function **prior** to the one currently selected
3. The function **currently selected**
4. The function **after** the one currently selected

Select the function you would like using the  or  keys.

A line with this symbol:

----- (= end of list symbol)

indicates that you have seen all the functions available and the display shows the first function again.

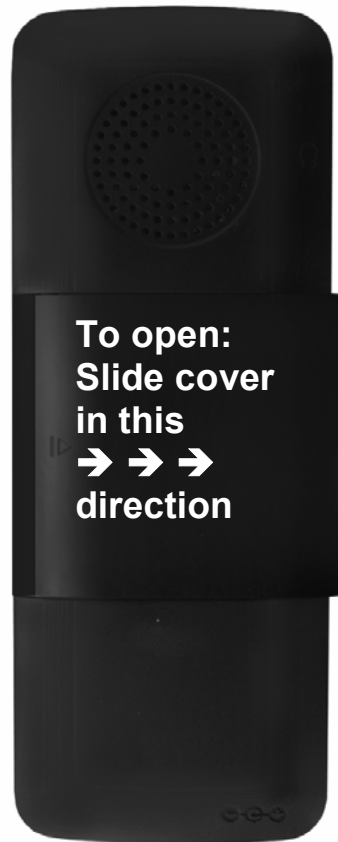

In these instructions, the text simply represents the actual information which appears in the display *in italics*, e.g. *Time* replaces **12:45**.

4.4 Battery and SIM card compartment

1. On the rear of the phone is a cover, under which you will find the battery and the SIM card.

The cover closes with a catch to prevent it from opening accidentally.

2. Push the cover to the right – it should slide across approx. 5 mm. Now remove the cover.
3. You can now slide the cover to the right approx. 5mm and remove.
4. When replacing the cover, turn it so that the **symbol on the rear of the cover points to the right**. Place the cover on the housing approx. 5 mm to the right and then slide it to the left. The safety catch will engage automatically.

After opening the cover ...

... you will see the battery, which you can easily remove and place to the right hand side with the connection leads still attached.

The SIM card is mounted under the battery compartment.

4.5 Battery

Your phone is fitted with a top quality rechargeable battery. Before a new battery is used for the first time, it must be charged up for at least 4 hours.

On the left hand side of the display panel you will see an elongated battery symbol. The more dark bars are shown in the display, the higher the charge level of the battery. When the battery is fully charged, the phone can remain switched on and ready for use (i.e. on standby) for up to approx. 120 hours (approx. 5 days) or in use for up to 5 hours of continuous conversation. When the battery has a charge of around 10% (i.e. the equivalent of 8-12 hours on standby only) before it is fully discharged, a red battery light will start to flash on the top left above the display. At the same time, an acoustic signal will sound approx. every quarter of an hour to remind you that the mobile needs to be connected up to the charger in the near future. The message “**Charging**” will then appear at the top of the display.

To charge the mobile phone battery, insert the plug on the charger into the jack on the left hand side of the bottom of the mobile phone. Do not switch the mobile phone off while it is charging. **You can still receive and make phone calls while the phone is charging.** While the phone is charging, the text “**Charging**” appears on the display. The bars on the battery symbol on the left of the display flash in sequence to represent the charging process.

When the battery is fully charged (approx. 3½ to 4 hours for a fully discharged battery), the text “**Charged**” will appear.

Remove the charger from the phone. All the bars in the battery symbol on the left of the display will be filled in.

The battery will feel warm while charging – this is absolutely normal and is not a cause for concern.

Full performance of a new battery is achieved only after several charge and discharge cycles.

When the battery is fully discharged, a text will appear in the display when charging begins and the battery symbol will only start to flash after approx. 3 minutes.

Remaining charge indicator:

Your mobile phone can advise you of the precise charge level of the battery. However, no phone can tell you how many calls you can still make with the remaining charge. That’s why your mobile has no indicator to show the **absolute remaining operating time**. It might seem to the user that the device is only in ready-to-use (i.e. standby) mode, but the power requirement can differ greatly: if the mobile is in the car or indoors, it will need much more power to maintain the network connection than when it is near to a transmission mast. When conversations are held at a higher volume and in an area with poor reception, more power will be

required than in favourable conditions and with the volume turned down.

For this reason the battery symbol indicator shows the **charge remaining as a percentage of the full charge level** and not the remaining operating time.

Battery care:

Your mobile contains sophisticated technology and a top quality battery and so does not require you to take specific care of the battery while you use it (there is no memory effect leading to loss of capacity). You can recharge the device even after just a short period of use. Equally, you can use the device until the battery is fully discharged and the mobile switches itself off automatically. The electronic safety features ensure that a total discharge, which would damage the battery, is not possible. Recharge a fully discharged battery for at least 15 minutes before making any further calls, so that your next call will not be interrupted.

Please note that the battery is a consumable component of the mobile phone and is not covered by the warranty. Even the capacity of a top quality battery, such as the one used here, will of course diminish in time.

Storing the battery in excessively hot or cold temperatures will also gradually reduce the capacity.

Noticeably shorter times for conversation and when ready to use (i.e. on standby) will become apparent after approx. 1 – 2 years, depending on the extent to which the phone is used. In this case, we recommend that the battery is replaced. You do not have to be an expert in order to replace the battery. You simply have to carefully remove the battery connection leads from the mounting and re-attach them to the new battery's terminals in the same way (i.e. red lead on top and black lead underneath).

If you do not use your mobile phone for longer periods (i.e. several weeks), loosen the connection leads and remove the previously fully charged battery from the housing. To use the phone again, re-connect the battery (see above).

After removing the battery or when long-term total discharge has occurred, you will need to reset the time and date.

When replacing a battery, do not dispose of it in your household waste. Please hand the battery in for disposal at the retailer where you bought the replacement battery or take the battery to your local waste and recycling centre. We are of course also happy to receive batteries returned to us for disposal free of charge.

Warning

There is a risk of explosion if the battery is not properly replaced or is exposed to a naked flame. The battery must not be opened. Only use suitable original chargers and batteries. Take care when replacing the battery to attach the connection leads properly and the correct way round. Turn the connection leads so that the two red wires on the connector point up and the two black ones point down. The type of connection is designed in such a way that it cannot be inserted the wrong way round without using force.

4.6 Charger

Your mobile phone is specifically intended to be used with the charger supplied. The charger connection is polarized for compatibility.

Warning

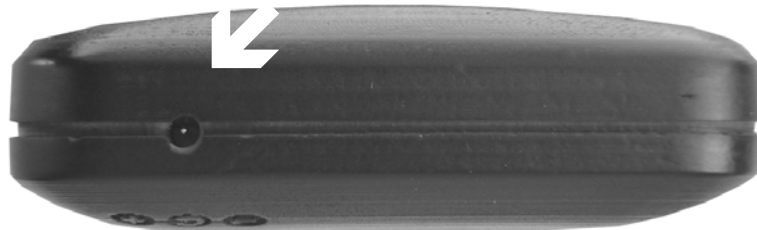

Do not allow the phone to come into contact with moisture and use the charger in dry conditions only. It is designed to be operated using a power supply of 220V~ only. Use original chargers only.

The use of other chargers may damage the phone and invalidate the warranty.

Insert the plug on the charger lead vertically into the jack on the bottom of the phone on the left hand side, as illustrated below, and push it all the way in.

Charger jack

When the connection has made contact, the message “**Battery charging**” will appear in the display of the mobile phone.

As long as the mobile is connected to the charger, the red battery symbol will show on the top left of the display.

When the battery is totally discharged, the text appears at the start of the charging process in the display and the battery symbol flashes only after approx. 3 minutes.

4.7 SIM card

To be able to make calls with your phone, you need a small electronic memory card called a SIM card.

(Size as illustrated)

It receives and saves all the information required to operate the phone:

- Security codes such as your PIN number (Personal Identification Number)
- Phone book
- Text messages
- Information on special services

How do I obtain a SIM card?

Your mobile phone is normally supplied without a SIM card. Please contact your mobile phone dealer or a network operator and/or service provider. You will be able to take out a service contract with them. There are a number of different types of contract which might be useful for you depending on your usage (i.e. the type, duration and frequency of your phone use):

- Post-paid (usually with monthly fees and statements)

- Top-up cards, with pre-paid units. When the units have all been used up, the card must be “topped up” with credit (e.g. for € 15 or € 25).
- Service contracts with a simplified charging structure. Various store chains, discount businesses and other companies offer these types of contract.

Your mobile phone is suitable for any type of contract and can be used without restriction with SIM cards from all mobile phone network operators and/or service providers throughout Europe (in some EU countries you will need a card from a local supplier). It can also be used worldwide for other mobile phone networks (in Asia and America), although the phone is not ideally designed for these networks.

You can of course use your mobile phone with a SIM card from an ongoing contract or from an existing phone.

When the phone is not fitted with a SIM card, it is only possible to call the 112 emergency number. Please see page 137.

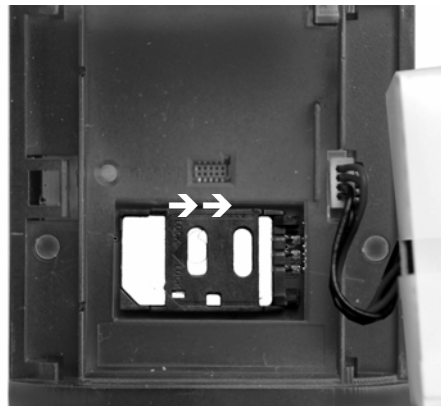

Handle and look after your SIM card with great care in order to avoid damaging it. If your SIM card is lost, stolen or damaged, please contact the network operator and/or service provider you obtained it from as soon as possible.

Inserting the SIM card

The SIM card is inserted underneath the phone battery.

Make sure that the phone is switched off and that it is not connected to the charger. Turn the phone over and remove the cover of the battery compartment, as previously described, and lift the battery to one side. Leave the battery attached to the connection leads.

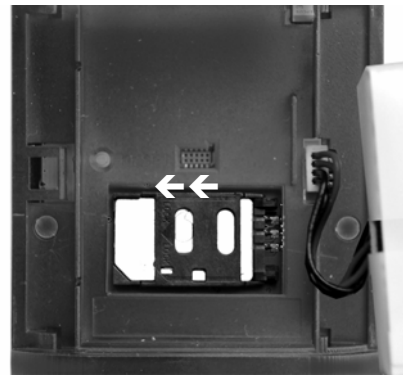

Using your fingernail, slide the SIM card holder on the black grip to the right until it lifts up.

Insert the SIM card into the raised card holder so that the **gold-coloured contacts on the SIM card face downwards** towards the phone and the **“cut-off” corner** of the SIM card is at the **bottom left hand side**.

Lower the card holder, **pressing it gently down at the same time**, and slide the grip to the left until you feel it resist and lock into place.

Then insert the battery once again into its original position. If necessary, press the connection leads on the battery back into their guide slots. Finally, close the cover of the battery compartment.

4.8 Antenna

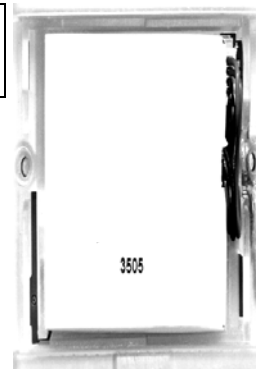

Your mobile phone has a built-in antenna. This is located internally across the base of the device. The advantage of this position is that antenna radiation is reduced in the immediate area of the head, thus also minimising interference with hearing aids, for example. To avoid any negative effect to the reception and transmission qualities of the antenna, you should not cover or shield the lower part of the phone with metallic objects (e.g. metal stands, gloves coated with metal, or by setting it down upright on a metal plate).

5 Accessories

Included in delivery:

Art. no. 20A1
Li Ion Battery 1100 mAh

High performance original battery

Available separately:

Your supplier or any specialist dealer will be happy to provide more detailed information on these dedicated accessories.

Art. no. 20B1 **Charging stand**

This charging stand provides a practical and attractive means of storing your mobile phone safely and immediately to hand while charging. The charging stand is supplied without a mains charger – the mains charger supplied with the mobile phone simply plugs into the back of the stand.

Art. no. 10K1 **Headphones with microphone**

The headphones plus microphone set is just the right accessory for safely making calls, for example in the car, so that you don't have to hold the mobile phone directly to your ear or for making calls "handsfree" without using the loudspeaker. (Comprises a 1.2m (approx.) lead with a built-in, highly sensitive microphone and top quality earphones.)

Art. no. 10E1 **Inductive headphones**

Although this mobile performs superbly for wearers of hearing aids (i.e. minor interference only), some hearing-aid wearers find it more comfortable to use an inductive handsfree set. The handsfree set establishes a connection between the induction loop receiver on the hearing aid and the mobile phone which is not acoustic and is easy to operate. Put the hearing aid into the T position and it's ready to transmit. For more detailed information about our inductive headphones, please visit our website at www.big-easy.eu and click on "Accessories".

Art. no. 20H1 **Mobile cases**

This case has been developed specifically for this mobile phone to keep the phone safe and well-protected. The case can be worn on a belt or around the neck attached to a lanyard.

You will be able to make calls, select numbers from the mobile phone book and use the emergency call functions with the mobile still in the case.

Art. no. 10Z1 In-car charge lead

The in-car charge lead provides a direct power supply for the charging of batteries – plugs into the 12V cigarette lighter.

Art. no. 10G1 In-car mount

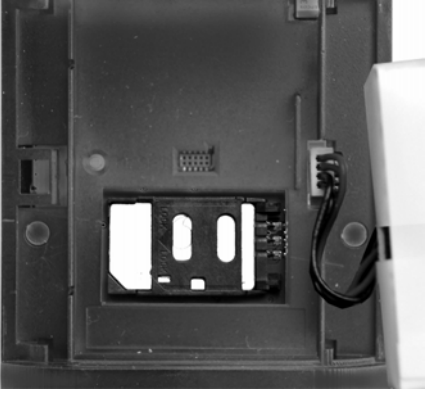

This mount has an extremely robust suction attachment with a vacuum clip to secure your mobile phone to the windscreen or dashboard for use in the car (adhesive mount supplied with goods). It will always hold your phone securely even on bends or when braking. The flexible swan's neck design allows the phone to be adjusted to the perfect angle for reading. The side clamps are padded to protect your mobile and to prevent noise while travelling. You can of course still use the in-car charge lead with the mount.

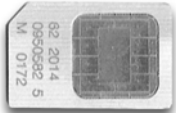

Getting started

Procedure	What to do
6.1 Charging	Connect the mains charger to the 220 V~ mains supply. Plug the charger lead into the bottom of the phone on the left hand side and push it all the way in. When charging for the first time, charge for 4 hours (or for at least 15 minutes thereafter).
6.2 Opening the cover of the battery compartment to insert the SIM card	<ol style="list-style-type: none">1. Position the device in front of you with the front facing down.2. The cover of the battery compartment is located on the back of the phone.3. Slide the cover approx. 5 mm to the right.  The diagram shows the back of a black mobile phone. A rectangular cover is partially slid to the right, revealing a circular opening. Below the cover, there is a white rectangular box containing the text "Slide the cover in this" followed by three right-pointing arrows and the word "direction" below them. <p>Slide the cover in this → → → direction</p>

Getting started

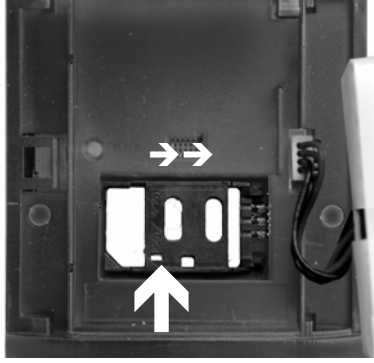

Display	Outcome / Tips

Getting started

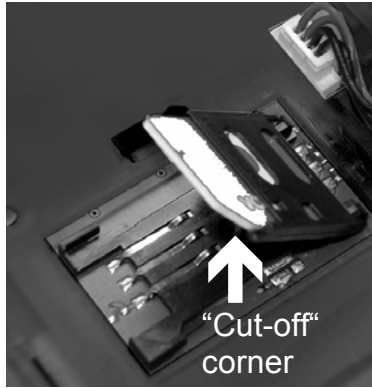

Procedure	What to do
6.3 Opening the SIM card holder	Open the device's SIM card holder by pushing the holder on the black grip firmly to the right using your fingernail. You will then be able to lift up the holder.
6.4 Inserting the SIM card	<p>You SIM card will look like this:</p>  <p>On purchasing a new SIM card, it must first be removed very carefully from the credit card-sized packaging.</p> <p>Position the SIM card so that the <u>gold-coloured contacts</u> are facing the phone. Push the card into the raised holder grip so that the <u>“cut-off” corner</u> of the card <u>protrudes on the bottom left hand side</u>. Then press the card holder back down.</p>

Getting started

Display

Outcome / Tips

You can obtain a SIM card from your mobile phone network operator, if you do not already have one from an existing phone.

Getting started

Procedure	What to do
<p>6.4 Inserting the SIM card continued</p>	<p><u>Press down the holder, now containing the card, while at the same time</u> sliding the black grip on the holder with your fingernail firmly to the left until you feel it lock into place.</p> <p>.</p> <p>Put the battery back into the recess.</p>
<p>6.5 Closing the battery compartment cover</p>	<p>Place the battery compartment cover on the back of the phone <u>slightly off-set to right</u>. Ensure that the symbol on the cover is on the left hand side of the cover.</p> <p>Slide the cover to the left until it locks into place.</p>

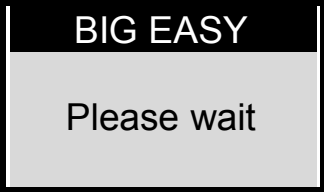

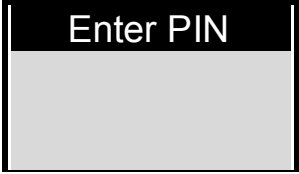

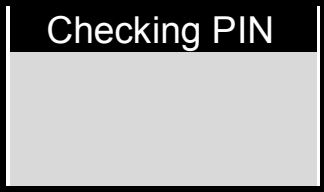

Getting started

Display	Outcome / Tips
	<p>The SIM card is now inserted.</p> <p>The battery is in place in its compartment.</p>
 <p>Close the cover by sliding it ←←← in this direction</p>	<p>The phone is now ready to switch on and make calls.</p>

7 How to make a call

How to make a call	
Procedure	What to do
7.1 Switching on	<p>Press down the key with the green circle (bottom left)</p>  <p>for three seconds</p> <p>Note: If you switch your mobile on using a key other than that mentioned above, the keys and display will light up (for use as a torch), but no text will appear in the display. Use the key on the bottom left hand side with the green circle.</p>
7.2 Entering the PIN number	<p><u>IMPORTANT: Enter the PIN number which belongs to your SIM card and NOT THE NUMBER GIVEN IN OUR EXAMPLE BELOW!</u></p> <p>IMPORTANT: This phone only accepts 4, 5 or 6-digit PIN numbers.</p> <p>e.g.     </p> <p>Enter your PIN number and confirm by pressing the big green key. If you enter an incorrect number <u>before</u> confirming, delete the incorrect number with the red  key.</p>

How to make a call

Display	Outcome / Tips
<p>Keyboard and display light up.</p>  <p>A rectangular display box with a black header containing the text 'BIG EASY' in white. Below the header, the text 'Please wait' is displayed in black on a light gray background.</p>	<p>Phone is switched on. You will now be asked for your PIN number.</p>  <p>A rectangular display box with a black header containing the text 'Enter PIN' in white. Below the header is a light gray area for text input.</p> <p>You will have received your PIN number – generally 4 digits –with your SIM card in a sealed letter from your network provider.</p>
<p>Each number appears clearly in the display for you to check.</p>  <p>A rectangular display box with a black header containing the text 'Enter PIN' in white. Below the header, the number '1 3 8 2' is displayed in black on a light gray background.</p>  <p>A rectangular display box with a black header containing the text 'Checking PIN' in white. Below the header is a light gray area for text input.</p>	<p>Checking PIN (If the PIN number is entered incorrectly three times, see page 138.)</p> <p>You only need to enter your PIN number when the PIN Query function is activated – see page 109</p>

How to make a call

Procedure	What to do
7.3 Automatic mobile phone network search	<p>The phone automatically attempts to connect to your mobile phone network.</p> <p>Depending on the strength of network reception, up to six bars of increasing size will appear on the right hand edge of the display as an indicator of the signal strength. (6= maximum reception, 0= no reception)</p> 
7.4 Dialling using the keypad	<p>Enter the phone number you are calling using the number keys</p>

	<p>This function is useful when you are unable or prefer not to take a call.</p>

8 Menu structure

The menu on your mobile phone is structured in a very simple manner.

By pressing the  key, you can obtain the **four basic functions** for the **Level 1** menu:

- Phone book
- Settings
- Alarm
- SMS

You have the option of refining or resetting these functions.

We describe these setting options as

- **Level 2** functions

Where these functions have further setting options, these are described as

- **Level 3** functions

Functions from Level 3 onwards are usually only required by users who wish to use all the functions available or who would like to engage further settings in addition (e.g. emergency call functions, switching off the Enter PIN function, etc.).

Menu structure

Simplified illustration for using the basic functions

	Level 1	Level 2
Menu 	Phone book (p. 67 ff)	New entry (p. 67 ff)
		Entries A-Z (p. 53, p. 71)
	Settings (p. 80)	Vibration (p. 80)
		Ringtone volume (p. 82)
		Keypad sound (p. 84)
		Letter style (p. 85)
		Date Time (p. 87)
		More (p. 89 ff)
		Alarm
SMS	Set alarm / off (p. 115)	
	See Chapter 13 (p. 117ff)	
	Call list	Missed (p. 65)
		Last number (p. 61)
		Received (p. 63)

Menu structure - Overview

9 Calling stored phone numbers

Your mobile phone provides various options for saving phone numbers for your convenience:

Procedure	What to do
<p>9.1 Direct dial</p> <p>This function can only be used when phone numbers have been assigned to the direct dial keys. See page 75</p>	<p>Press the  or  or  key. The name and phone number of the person you have stored for this key is shown in the display.</p> <p>If you now press the green  key, a call will be made to this person.</p>
<p>9.2 Speed dial</p> <p>This function can only be used when phone numbers have been assigned to the speed dial keys. See page 75</p>	<p>Press key  or  ... up to  and hold for two seconds. The name and phone number of the person you have stored for this key is shown in the display and the call <u>will be connected immediately</u> to this contact.</p>

NOTE: On switching on your mobile phone, you may have to wait approx. one minute before making a call, depending on the number of entries in your phone book. The message “**SIM not ready. Please wait.**” will be displayed during this time.

Display	Outcome / Tips

10 Storing phone numbers in the memory

Procedure	What to do
<p>10.1</p> <p>Phone book</p> <p>Storing a new entry</p> <p>Enter name</p>	<p>First press the  key,</p> <p>then the  key, and then</p> <p>press the  key once again.</p>
<p>NOTE: On switching on the mobile phone, it can take approx. one minute - depending on the number of entries in your phone book - before you can call up or edit stored numbers or store new numbers. The message SIM not ready. Please wait. will be displayed during this time.</p>	
<p>Phone book</p> <p>Saving a new entry</p> <p>Enter name</p> <p>E.g.: Anton</p>	<p>A = 1st letter, so press </p> <p>N = 2nd letter, so press  </p> <p>T = 1st letter, so press </p> <p>0 = 3rd letter, so press   </p> <p><u>Wait for two seconds.</u></p> <p>N = 2nd letter, so press  </p> <p>End entering the name by pressing the  green key.</p>

	Display	Outcome / Tips
		<p>You enter a name using the letters on the number keys. Names are stored in the phone book memory in alphabetical order. If you would like to store a name before the letter A, put a number in front of the name (e.g. "1Ursula")</p> <p>The first letter is capitalised automatically. To capitalise other letters, press the  key.</p>
		<p>When you press a number key, the other letters and characters that you can use with this number key are displayed on the bottom left. Press the key once again to call up the next letter or character. If you enter an incorrect letter or character, you can delete the previous entry by pressing the red  key.</p>

Procedure	What to do
<p data-bbox="316 192 395 226">10.2</p> <p data-bbox="316 277 536 315">Phone book</p> <p data-bbox="316 365 549 445">Saving a new entry</p> <p data-bbox="316 495 564 528">Enter number</p> <div data-bbox="316 790 580 1413" style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p data-bbox="316 797 576 1337">NOTE: On switching on the mobile phone, it can take approx. one minute - depending on the number of entries in your phone book - before you can call up or edit stored numbers or store new numbers. <div style="border: 1px solid black; padding: 5px;"> <p style="text-align: center; background-color: black; color: white; margin: 0;">Note:</p> <p style="text-align: center;">Function not possible</p> </div>	

Procedure	What to do
<p data-bbox="316 161 443 197">11.6.11</p> <p data-bbox="316 241 564 286">More settings</p> <p data-bbox="316 376 587 501">Select network (abroad or in border areas)</p>	<p data-bbox="603 241 1200 367">Using the  key, select the Settings function and then the More option (see Pages 89 ff - Item 11.6)</p> <p data-bbox="603 443 1209 537">Press the  key 10x to select the “Select network” option.</p> <p data-bbox="603 645 1107 725">Confirm by pressing the green  key.</p> <p data-bbox="603 761 1251 931">Using the  or  key, select the mobile phone network you would like to use for transmission or switch to automatic network selection.</p> <p data-bbox="603 976 1251 1021">Confirm your selection using the green  key.</p> <p data-bbox="603 1205 1235 1330">The mobile phone network you have currently selected is shaded and is indicated by an arrow.</p>

Display	Outcome / Tips
  	<p>While you remain in your country of residence, your mobile automatically transmits using the mobile phone network related to your SIM card. However, when abroad or in border areas, the phone automatically transmits using the mobile phone network with the best reception. If you prefer to use your home mobile phone network only in border areas, you have to select your “home network” manually. When abroad, it can also be cheaper to select a specific mobile phone network and not simply the one with the best reception. You can also select and confirm this manually.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>When a network is selected manually and the reception is too weak, the phone will not automatically search for a new network. Instead you will receive the message: Network search</p> </div>

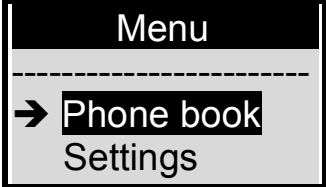

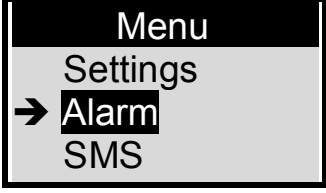

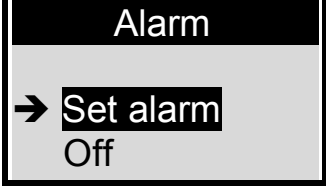

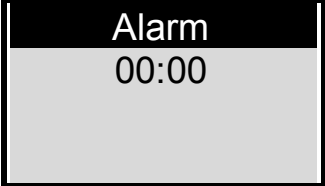

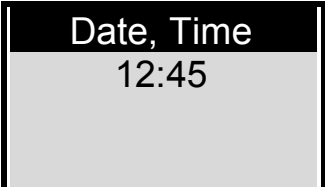

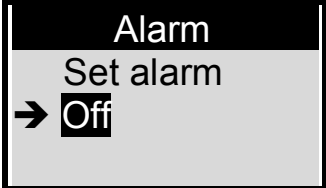

Procedure	What to do
<p data-bbox="316 161 446 197">11.6.12</p> <p data-bbox="316 241 566 286">More settings</p> <p data-bbox="316 376 510 497">Automatic call acceptance</p>	<p data-bbox="603 241 1197 362">Using the  key, select the Settings function and then the More option (see Pages 89 ff - Item 11.6)</p> <p data-bbox="603 443 1209 542">Press the  key 11X to select the “Auto answer” option.</p> <p data-bbox="603 645 1109 721">Confirm by pressing the green  key.</p> <p data-bbox="603 801 1244 967">Using the  or  key to select whether you would like the automatic answering function to be switched on or off.</p> <p data-bbox="603 981 1248 1012">Confirm your selection using the green  key.</p> <p data-bbox="603 1209 1220 1326">The function which is currently active is shaded and is indicated by an arrow.</p>

Display	Outcome / Tips
	<p>Your mobile phone rings for approx. 10 seconds for an incoming call and then answers without you having to do anything. It switches to the hands-free function so that you can have a conversation without having to hold the mobile in your hand.</p> <p>This function is ideal for use by those who are bed-ridden or paralysed.</p> <div data-bbox="758 1187 1260 1361" style="border: 1px solid black; padding: 5px; margin-top: 20px;"> <p>As you have to switch this function on deliberately, unauthorised "eavesdropping" would not occur.</p> </div>

14 Other functions and instructions

14.1 SOS functions

1: Although your mobile phone may have picked up reception from a mobile phone network which is not related to your SIM card, you will still not be able to make or receive calls. However, it is possible to call the 112 emergency call number to speak to the nearest emergency call centre. You will be able to use this service from the information on the display.

2: Switch on your mobile and enter "112" instead of your PIN. Press the large green call acceptance key and your phone will call the nearest emergency call centre.

14.2 Using the phone without a SIM card

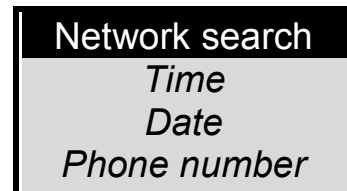

When you do not have a SIM card in your mobile phone, you cannot make or receive phone calls. However, once it is switched on, you can call the 112 emergency number and speak to the nearest emergency call centre (if this service is supported). You will be able to use this service from the information on the display.

NOTE: When you use the phone without a SIM card, the operating time of the mobile is significantly reduced.

14.3 No network reception

When your mobile phone is unable to find a suitable mobile phone network for your SIM card, you will see the message "network search" at the top of the display. Move to another position and try to stand with your

phone where there is better reception (e.g. outside the car or a reinforced concrete building). If you try to phone, the message "No network" appears in the display. If necessary, check the reception by using a SIM card issued by a different network operator.

14.4 Location finding

The mobile phone's location finding facility using the mobile phone network (GSM network) does not require any preparation of the phone itself. The location finding facility is provided by various network operators and service providers. You can find out more about the various suppliers on the internet. Your mobile phone dealer or network operator can provide you with further information.

Satellite location finding via GPS (Global Positioning System) is not possible with this phone.

14.5 Entering the PIN incorrectly three times

If the PIN number is entered incorrectly three times, the SIM card will be blocked. Your mobile will then ask you - when you switch it on - for your PUK (Personal Unblocking Key) and then for a new PIN. You have been given a second PIN - the PUK - for this case. Consult the documents or instructions provided by your network operator to find out how to unblock your SIM card. If you continue to enter the PIN incorrectly, you should contact your network operator, as your SIM card will then be completely blocked and can no longer be used. (See GSM codes on p.144)

14.6 Changing your PIN

Your mobile phone is not equipped with the function required for changing the PIN number of your SIM card. (See GSM codes on page 144)

14.7 Torch function

Your phone is fitted with 21 extremely bright white LEDs. Even when the phone is switched off, you can switch these on for 18

seconds by pressing and holding the direct dial or number keys for two seconds. This is intended to help you find your way in the dark. When the key lock is activated, switch the light on using the “Hang up” key.

14.8 Saving your phone book onto or from the SIM card

All the phone numbers and text messages which you save are only stored on your SIM card. It is not possible either to copy the data onto the phone’s memory or to copy the data using this phone.

14.9 Programming your phone to divert or forward calls

It is not possible to programme or change call diversions via a menu function on the mobile. Your mobile phone network provider provides these functions via specific key combinations – they or your dealer will be able to advise you about this. Your mobile phone supports these functions. (See GSM codes on page 144)

14.10 Restoring the factory settings (Reset)

If all of sudden your mobile phone fails to respond, you can reset the electronics, either by pressing the small round button on the left above the SIM card holder for two seconds or by removing the connection leads from the battery for 10 seconds.

You can restore the factory settings (for Settings) by entering the number 9999 as your own phone number (see Chapter 11.6.5 Page 99). The data stored in the phone book and text message memory on the SIM card will not be lost when you do this.

14.11 Calling up remaining credit / call time on a top-up card

Using specific key combinations, you can call up the remaining credit units and call time left on your top-up card. Your mobile

phone supports these functions. Your dealer or network operator will be able to advise you of the key combinations. A convenient way to call up this information in future is to save the key combinations on a direct dial or speed dial key.

14.12 Special messages on the display

Note SIM not ready Please wait SIM error

Please wait approx. 2 minutes until all the data on the SIM card has been processed by the phone.

Please check whether the SIM card is properly fitted and the holder closed.

Older SIM cards (before 2002) can cause problems when the phone is switched on. SIM card suppliers will normally exchange new cards for old ones free of charge.

Check whether you are still receiving an error message by using the SIM card from another network operator.

Note Check battery

There may be a problem with the battery or with the connection leads. Please check the battery and replace, if necessary.

Note GSM module error

Follow the instructions in Chapter 14.10. If the error persists, please refer to Chapter 15 F.

Garbled text message

Someone is sending you a text message with special characters or an MMS (text message with images), which cannot be read by the phone. This can also occur when using an old SIM card (see above).

Note 112 call only

If you have inserted a SIM card which also works in other mobile phones, this mobile phone will display "112 call only". Please re-insert the SIM card correctly. Please check using another SIM card, preferably one from another network operator. Check the SIM card holder (i.e. the part that flips up) for damage.

Older SIM cards (before 2002) can cause problems when the mobile is switched on. SIM card suppliers will normally exchange new cards for old ones free of charge.

Check whether you are still receiving an error message by using the SIM card from another network operator.

15 Trouble-shooting

If you encounter problems when using your phone, please feel free to contact us via our website www.fitage.com or our Helpline (the phone number on the back cover). You can obtain further information on trouble-shooting and our service provision from here, as well as on a range of questions you may have.

A.) Problem: It is not possible to switch on the phone or to recharge it. After attaching the charger, the “Battery charging” message does not appear in the display and the red LED top left does not light up.

Solution: It can take up to 4 minutes for the display to appear and for the red LED to light up when the battery is totally discharged.

Have you accidentally attached the charger to the earphone jack at the top on the side?

Check whether the charger is connected correctly and whether the charging process is underway. Check the mains voltage and if necessary use a different socket outlet. Check the power supply between the mobile phone and the battery and clean the contacts if necessary. The battery may be defective and should be replaced.

The keys and the display are lit up but there is no text:

Are you attempting to switch on the phone using a different key to the one with the green circle bottom left by mistake? Have you pressed the green circle key for at least 3 seconds?

B.) Problem: Outgoing call is not connected.

Solution: Move to another location, for example beside a window or in the open, until the display registers the signal strength. If the network is overloaded, you will have to try again later. Check whether you have dialled the correct number. Check whether there is still credit on your top-up card.

C.) Problem: Incoming call cannot be received

Solution: Try to establish a connection in order to check whether the mobile phone and network are in working order or whether reception is available. Check the call diversion function, in case this is activated, and if necessary deactivate it. Check your top-up card in case this is no longer activated.

D.) Problem: The sender's phone number does not appear when a call is received.

Solution: The phone number is always switched on automatically for transmission with this mobile phone. (It can be switched on or off using the GSM code on page 144.) If the phone number is not transmitted, it may be because the service was previously switched off on the SIM card (please switch the SIM card phone number transmission function back on using the GSM code or another mobile) or because the service was previously switched off by your network operator (please contact your network operator). The phone number display can be set using another mobile, your network provider's website or their Hotline. Using older SIM cards (before 2002) can lead to problems in transmitting the phone number. SIM card suppliers will normally exchange new cards for old ones free of charge. If possible, check by using the SIM card from another network operator.

E.) Problem: The phone cannot be used for the operating time indicated for calls or when switched on and ready for use (i.e. on standby).

Solution: The battery will only reach full capacity after several charge cycles.

If the battery is more than approx. 2 years old, it will no longer be capable of taking a full charge.

We obtained data concerning operating times during optimum network reception conditions, without additional use of the phone by switching on the keypad illumination or making phone calls. Whenever phone calls are made, the keys are used more frequently or where network reception is reduced, the phone consumes more energy and the battery performance is reduced (sometimes significantly). Therefore, for a phone which lies unused at home (within a reinforced concrete structure to exacerbate reception) and is 3 km from the transmission mast, the operating time is reduced to 3 days, as an example.

F.) Problem: There are problems with the mobile phone functions or the phone cannot be operated at all.

Solution: Open the battery compartment and flip the battery forwards. In the top left corner under the battery you will see a small button labelled RESET. Press this button for approx. 3 seconds using a pencil. If this does not solve the problem, remove the SIM card and the battery (also detaching the connection leads). Re-connect the battery and re-insert the SIM card. If you are still having problems, contact our Service Centre.

G.) Problem: Your mobile phone has gone missing.

Solution: Call your service provider immediately in order to prevent misuse. If you lose your phone or your SIM card, you will need the following information:

- The number of the SIM card (this is on the card)
- Your mobile phone number
- The 15-digit IMEI serial number for the phone (this is under the battery)
- Customer service number for your service provider

H.) Problem:

Your top-up card cannot be topped up or activated when entering the numbers. Control commands do not react when keyed into the language menu.

Solution: Press the keys very slowly (approx. one per second) in order to generate the DTMF tones (i.e. key tones) correctly.

GSM codes for mobiles

GSM codes are code numbers which allow all mobiles worldwide on the mobile phone network to set the various functions easily, thus preventing painstaking queries and entries in the menu of the mobile phone.

GSM codes often vary between mobile phone network operators. Please contact your mobile phone network operator if the codes listed below do not work on your phone.

- When you have entered a code, you must press the large green Enter key
- When calls are diverted to the mailbox, the phone number of your mailbox must be entered.
Please ask you mobile phone network operator about this.

Function	Comment		
	On/active	Off	Query
All diversions		## 002 #	
All conditional diversions (engaged, unobtainable, not answering)		## 004 #	
Change PIN	**04*old PIN*new PIN*new PIN#		
Change second PIN	**042*old PIN2*new PIN2*new PIN2# (for Phase 2 SIM cards only)		
New PIN using PUK	**05*PUK*new PIN*new PIN#		
New second PIN using PUK	**052*PUK*new PIN2*new PIN2# (for Phase 2 SIM cards only)		
Read off phone ID number (IMEI)			*#06#
Divert all calls [Difference here between (De-)activation (** resp.##) and (De-)registration (* resp. #).]	**21*Phone number# (On and active) *21# (active)	##21# (Off) #21# (Inactive)	*#21#
Display caller's number on receiver's phone (CLIP) (call number display)	*30#	#30#	*#30#

Frequency range	880 – 960 MHz
GSM class	1 (1 Watt)
Frequency range	1710 – 1880 MHz
GSM class	1 (1 Watt)
Frequency range	1850 – 1990 MHz
Weight	215 g
Dimensions	179 x 68 x 23 mm
Li-Ion battery	1100 mAh, 3.7V
Operating temperature	- 10°C... 55°C
SIM card	3.0 Volt

18 Disposing of this product

(Waste electrical and electronic equipment)

The marking on the product or on the packaging and literature accompanying the product  indicates that the product may not be disposed of with normal household waste at the end of its service life. Please dispose of this equipment separately to other types of waste to prevent causing damage to health and/or to the environment.

Private users may hand the phone and accessories in free of charge at municipal waste depots or recycling stations.

Batteries must not be disposed of in household refuse. Users are legally obliged to return used batteries. You can hand in your old battery at your local municipal waste depot or wherever batteries are sold. You are also welcome to send your battery and phone free of charge to the Service Centre mentioned in this booklet for disposal.

By law, the manufacturer and/or distributor in the respective country has a contract for waste disposal with an authorised company.

19 Terms of warranty:

Notwithstanding the right to claim for defects against the seller, the user (i.e. the customer) is granted a warranty according to the following conditions:

- New devices and their components which have proved to be defective within 24 months of the date of purchase due to defective workmanship and/or materials will be replaced or repaired at the discretion of the manufacturer free of charge to provide a device of the same technological standard. For parts subject to wear and tear (e.g. battery, keypad, housing, case – insofar as these are included in the scope of delivery), the warranty is valid for six months from the date of purchase.
- This warranty is not valid insofar as any defect on the device is the result of improper handling and/or failure to give due attention to the phone manual.
- This warranty does not extend to work undertaken by contract dealers or by customers themselves (e.g. installation, configuration, change of software). Manuals and any software supplied with the device by means of a separate data carrier are likewise exempt from the warranty. This also applies to SIM cards sent off with return goods. No liability is accepted for the whereabouts or use of unsolicited SIM cards which are sent off with return goods.
- The sales receipt with date of purchase is accepted as proof of warranty. Warranty claims are to be made within two months of a warranty case having been noted.
- Devices and/or components which are returned to the manufacturer as part of an exchange and are replaced become the property of the manufacturer.
- This warranty is valid for new devices purchased in the European Union. The guarantor is the manufacturer: .

fitage GmbH & Co. KG, Zur Waldau 15, D-68239 Mannheim. Please note that unsolicited return goods cannot be accepted at this address. In the event of a warranty claim, please contact the fitage Service Center (see back page), or - for our customers abroad - please contact the local authorised dealer.

- Any further or other claims on this manufacturer's warranty are exempt. The manufacturer accepts no liability for disruptions to service, loss of profit or loss of data, additional software or other information of any kind downloaded by the customer. The customer is responsible for safety in these cases. Exemption from liability does not apply where liability is mandatory, e.g. in accordance with product liability legislation, in cases of intent, gross negligence, due to loss of life, bodily injury or damage to health or due to the breaching of substantive contractual obligations. Claims to recover damages arising from a breach of substantive contractual obligations shall however be limited to foreseeable damage which is intrinsic to this type of contract insofar as there is no intent or gross negligence, or due to loss of life, bodily injury or damage to health, or due to a breach of substantive contractual obligations.
- The warranty period is not extended when the warranty is invoked.
- Where a warranty claim proves to be invalid, the manufacturer reserves the right to invoice the cost of replacement or repair to the customer. The manufacturer will advise the customer accordingly in advance.
- The above provisions do not imply a change in the burden of proof to the detriment of the customer.

20 Glossary

Chip card: = SIM card

Direct dial key: A separate key, to which you assign a specific phone number.

IMEI: (International Mobile Equipment Identifier) Unique identification number for your mobile. The IMEI no. is on the outside of the box in which you bought your phone or on a label in the battery compartment. See page 100 to display this number on your phone.

Incoming call: A call received on your mobile.

Mailbox: An answering service which records messages, which you can listen to on your mobile. These messages are saved on the computer of your network operator until you listen to them.

Missed call: Your mobile rings but you did not take the call.

Network operator (provider): A company which gives you access to the mobile phone network.

Outgoing call: A call made from your mobile.

PIN: (Personal Identification Number) Your personal code for your SIM card, which is issued to you with your SIM card.

PUK: (Personal Unblocking Key) The number which unlocks a blocked SIM card.

Reset: The function which resets the phone and its settings electronically to the factory settings.

SIM card: A plastic card with a tiny electronic memory (i.e. chip) which gives you access to the services of your network provider (= chip card).

SMS: (Short Message Service) Sending and receiving of text messages. SMS can be used colloquially to mean text messaging.

Speed dial key: A number key, to which you assign a specific phone number (make a call by pressing and holding the key).

Text message: = SMS

Service instructions

There may be a number of reasons why questions or problems arise when getting started and using your phone.

We can provide fast and personal assistance:

If you have any questions regarding the operation of your phone or any technical defects to report, please contact your local product-service first, then **fitage** at:

fitage Service and Support Centre

Tel. +49 (0)1805 348 243

Fax +49 (0)1805 348 244

email: service@fitage.com

You can find the answers to a range of questions by clicking on "Frequently Asked Questions" at **www.fitage.com**.

Keep these operating instructions, your sales receipt and the IMEI no. of your phone (see p. 149) close to hand.

If your phone has obvious technical defects, you will be given an address and RMA number for return of goods by our Service Centre, which you must quote on the warranty certificate and on the outside of the packaging of your return goods. Please send the phone to us together with the warranty certificate, a copy of the proof of purchase, the RMA no. and a precise description of the fault.

Do not send us your SIM card or any separately purchased accessories with your return goods.

Goods which are returned not prepaid, without an RMA no. or sent to company headquarters in Mannheim/Germany **will not be accepted.**
